

ACCESS MANAGEMENT

POSIERIS
TECHNICAL SYSTEMS

POPIA-By-Design

Digitally Transforming your physical security system management

Digital transformation represents the most significant shift in the past 30 years, and no sector, including physical security and law enforcement, is exempt from its effects.

For many years, the physical security industry has gradually accepted digital transformation. However, this slow adaptation has led to various challenges for both integrators and end users. These issues include poor system integration, inadequate information, connectivity problems, lifecycle management difficulties, and more.

The emergence of cloud-based digital platforms specifically designed for the physical security sector presents companies with an opportunity to harness cloud technology to enhance the management and delivery of their physical security systems

A digital visitor management system (VMS) simplifies the oversight of visitors, employees, and contractors. By digitizing the visitor management process, organizations can reduce manual tasks and improve the overall experience for visitors.

At Osiris Technical Systems, we provide a wide range of ID/Driver's License and Biometric readers from leading global manufacturers. Our partners consist of a specialized team of developers and architects, ensuring you receive the latest Access Management software solutions for your convenience and safety.

Digitized Physical Security

Our technology allows you to oversee all your physical security applications through a single, cutting-edge integrated solution. Our specialized platform operates effectively in various environments, such as office buildings, reception areas, residential estates, construction sites, roadblocks, and beyond.

Residential

Resident Management

Effortlessly oversee your resident population through the online dashboard. Access contact details, resident files, pet information, vehicle data, communication logs, roles, connections, and much more.

Pet Management

Oversee requests and approvals for pets within the property. Keep track of breed, color, tag information, health details, and more. Utilize the dashboard for effortless searching.

Asset Management

Residents can easily manage their garage through the app by registering their cars, boats, and golf carts in the system. This allows management to keep track of who operates which vehicle.

Communication Hub

Receive tickets, updates, documents, and alerts from residents. Set specific categories to manage ticket statuses, add notes, and engage in communication with residents.

Visitor Access Management

Invite new guests or companies to the estate using various access code types. Stay informed with notifications about your visitors' movements.

Contractor Management

Easily create projects and oversee contractor companies along with vetted workers using our user-friendly Contractor utility.

Visitor Access Management

Invite new guests or companies into the premises using various access code types. Stay informed with notifications about your visitors' movements.

Staff Management

Oversee your employees' schedules, access permissions, and management approvals. Review time and attendance records while receiving alerts for access changes.

Asset Management

Facilities personnel can manage company assets such as computers, tablets, furniture and even cleaning equipment to ensure proper allocations, prevent theft, loss and abuse.

Contractor Management

Easily create projects and oversee contractor companies along with vetted workers using our user-friendly Contractor utility.

Document Resources

Use the app as your full filing resource with personal folders, classified folders, custom folders and general files

Emergency Response

Emergency Contacts

Incorporate Push2Call contact buttons within your application to assist residents during emergencies.

Panic Button

The app features a Panic Button that connects directly to on-site security officers. When activated, the officer is notified of your situation along with all relevant details.

Bluetooth Remote Control

The app includes built-in Bluetooth proximity settings to ensure that residents can exclusively utilize this remote control feature.

Traffic Management and Speed Regulation

We prioritize the safety and welfare of our users, registered residents, and their guests.

Extra

Access to a mobile emergency button can be provided to members of the community directly through the OpenItem mobile application.

Activation of the emergency button will inform selected family members and/or friends as well as the community security management. Information passed include the GPS location of the member at the time of his/her distress.

Mobile Technology for Safe Environments

In South Africa, driver license prints 2D barcode and fingerprint on the back side, national ID card is encoded with an RFID chip, and vehicle license contains a 2D barcode. In some cases, high resolution photos of drivers need to be taken, our handheld computers are equipped with a 2D barcode scanner, fingerprint sensor, HF RFID reader and camera. The device is pocket-size with a pistol hold, single-handed operations are easily realized in various fields of mobility application.

Enhance your Access Management capabilities with our comprehensive array of ID/Driver's License scanners, as well as biometric fingerprint and facial recognition devices for businesses and organizations for vehicle Access Management, automation of booms and gates, traffic control. Perfect for both personnel and asset oversight, we provide top-tier hardware tailored for security companies, businesses and property management entities, enabling them to operate with greater efficiency and accuracy

Chainway C5 Reader

All-in-one UHF RFID Reader. C5 adopts an integrated design, provides more stable UHF performance, and delivers higher durability. It features the Android 11/13 platform, highly sensitive fingerprint module, octa-core processor, optional mass internal memory and a large capacity removable battery. C5 also supports 2D scanning, NFC and other functions, which enables it to be widely used in public security, warehousing, retail, logistics, etc.

Chainway C66 Scanner

Highly expandable large-screen rugged handheld computer. Equipped with Qualcomm octa-core processor and Android 11/13, the C66 comes with a 5.5-inch HD display, barcode scanning, and NFC function. The device supports quick charge and UHF sled for high extensibility. It offers optional fingerprint recognition, volume measurement, built-in UHF function and with Wi-Fi 6-ready platform for higher data throughput and security that fully satisfy the needs in Access Management, logistics, manufacturing, retail and more.

Mobile Technology for Safe Environments

Chainway C6000 Reader

Portable and rugged handheld computer. It is built with Android 10 OS and high-performance processor, with a smooth and stable system configuration and longer battery life. Diverse functionality includes barcode scanning and NFC, and it is the ideal device for harsh circumstances like logistics and warehouses.

Lilliput TMT-8 Terminal

The TMT-8 Terminal automates your Access Management at a fraction of the price of thermal cameras, with facial recognition and temperature scanning capabilities in a compact design, fit for harsh environments.

Openitem Access Management enables you to manage your community / organization in one integrated state-of-the-art solution. You can rest assured that our solutions are designed with your safety in mind.
